Lab 2.1 - Node Check

To be sure that Node.js is installed and it is right version for this course, run the following command in the terminal:

```
node -v
```

This should output something like the following:

```
$ node -v
v16.13.1
$
```

As long as the first number (followed by "v") is 16, then the correct version of Node is installed for this course.
